Tech Ease 4 All

Using the Rotor to Change VoiceOver Settings

The rotor gesture supported by VoiceOver provides a quick way to adjust the speaking rate and change the language without having to go back to the Settings app each time a change is needed.

Before you can adjust the speaking rate with the rotor, you must change your preferences for VoiceOver in the Settings app:

1. Open the Settings app.
2. Choose General, Accessibility.
3. Select VoiceOver.
4. Tap the On/Off switch for Include in Rotor under Speaking Rate.

To adjust the speaking rate with the rotor, turn the rotor until VoiceOver announces “Speech Rate.” The rotor gesture consists of placing your thumb and index fingers on the screen and turning an imaginary
dial. Once speech rate is selected in the rotor, flick up to make VoiceOver speak faster or flick down to slow it down.

The rotor can also be used to change the language used by VoiceOver:

1. Open the Settings app and choose General, Accessibility, VoiceOver.
2. Select Language Rotor.
3. Tap the name of each language you wish to include in the rotor.

To switch to a different language while VoiceOver is on, turn the rotor until VoiceOver announces “Language,” then flick up or down to select the desired language.
