Tech Ease for All

How to Use the Zoom Feature in Mac OS X

The zoom feature built into Mac OS X can magnify the contents of the screen for low vision users. To use this feature:

1. Choose Apple, System Preferences, Universal Access.

2. Select the Seeing pane and choose the On button under Zoom.

3. To set the options for this feature, click the Options button on the right side of the window. The Maximum

Zoom and Minimum Zoom sliders are used to set the zoom amount when you activate the zoom feature. At the bottom of the window, you should set the option to have the screen image move only when the pointer reaches an edge, as some users find this setting less disorientng than having the screen image move along with the pointer.

	Set range for rapid zooming in and out:
	Maximum Zoom: Magnification (x): 2 4 6 8 10 12 14 16 18 20
	Minimum Zoom: Open VoiceOver Uti
	Keyboard shortcuts can be used any time zoom is on.
	To zoom past the maximum or minimum setting, hold down ン第= or ン第
	Show preview rectangle when zoomed out
	🗹 Smooth images (Press て第\ to turn smoothing on or off)
J	Zoom follows the keyboard focus
	on white 🛛 Use grayscale
	When zoomed in, the screen image moves:
	O Continuously with pointer
	Continuousiy with pointer
	 Only when the pointer reaches an edge
	contrasta ().
	 Only when the pointer reaches an edge So the pointer is at or near the center of the image

4. When you're finished, select Done to close the Options window.

 To zoom in, press Command + Option + = on your keyboard. To zoom out, press Command + Option + -. You can press these keys several times to increase or decrease the zoom amount.
